

Experiment No. 5

Student Name: Swapnil Gaurkar

PRN: 25070521504

Experiment Title

Apply array methods and object handling; create a cart total calculator with discount logic.

Software / Tools Required

- Visual Studio Code
- Google Chrome / Microsoft Edge
- HTML5
- CSS3
- JavaScript

Experiment Program Code

Files Used:

- index.html
- style.css
- script.js

index.html

```

    `■${grand.toFixed(2)}`;
}

function removeItem(index) {
  cart.splice(index, 1);
  displayCart();
}
```

Application Description

The application accepts product name, price, quantity, and discount percentage. Products are stored as objects in an array. JavaScript calculates the subtotal, discount amount, 10% tax, and grand total. The user can also remove items from the cart.

Features Implemented

Feature	Description
Product Entry	Accepts product name, price, quantity, and discount.
Array Handling	Stores cart items in an array.
Object Handling	Each cart item is represented as an object.
Discount Logic	Calculates discount amount for every item.

Feature	Description
Cart Calculation	Computes subtotal, tax, and grand total.
DOM Manipulation	Updates the cart table and summary dynamically.
Event Handling	Add Item and Remove buttons execute JavaScript.

Output

Shopping Cart Calculator

Product	Price	Qty	Total	Action
Notebook	₹120.00	2	₹240.00	Remove
Pen Set	₹80.00	3	₹240.00	Remove

Subtotal:**Discount:****Tax (10%):****Grand Total:**

₹480.00₹36.00₹44.40₹488.40

Output Summary

- Accepts product details through input fields.
- Stores products as objects in an array.
- Displays product-wise totals in a table.
- Applies the selected discount.
- Calculates 10% tax and grand total.
- Allows cart items to be removed.

Result / Conclusion

The Shopping Cart Calculator was implemented successfully using HTML, CSS, and JavaScript. The experiment demonstrated array handling, object handling, event handling, DOM manipulation, discount calculation, tax calculation, and dynamic cart updates.
